

Beil, LeRoy H.

Northampton Soldier Checks Army Tanks

HEADQUARTERS, EUROPEAN
THEATER OF OPERATIONS.—
Thousands of tons of wheeled dynamite—the deadly half-tracks of the United States Army—are being unloaded by the Ordnance Department in Great Britain for use in the final assault of the United Nations against Hitler's mythical "impregnable fortress."

The half tracks must be checked from stern to stern, inside and out. Assisting in the supervision of this mechanical check-up after the half-tracks are landed is Master Sergeant

LeRoy H. Beil, of 947 Main Street, Northampton.

After Sgt. Beil and his men get through with them, they get their final workout in the gun section, where fire power is added to horsepower. Everything must be "perfection double plus" before issuance to troops for use in action.
