Bethlehem will address its current and growing stormwater management responsibilities. These issues include local flooding and stream health as well as the challenge of maintaining aging storm sewer infrastructure across the City. Additionally, we will discuss increasing permit requirements placed on the City through EPA and PADEP. Bethlehem has developed a plan on how to effectively update its current stormwater program to address these issues. We are now discussing how these improvements will be sustainably financed. We believe that it is critical that the public is aware of the City's stormwater management activities and challenges; and how we anticipate property owners to participate in working with the City to address them.
